

Secure Off-Site Backup

simple, automatic, fuss-free

The easiest and most secure way to protect your business critical Data

Off-site back-up technology which was previously only accessible to large corporate users is now available to businesses of all sizes, providing backup and disaster recovery in one affordable, easy to use solution.

Remove the headache of changing tapes or upgrading media by securely backing up over the internet to secure, managed servers with additional failover protection. There are no more excuses for missed backups or worn out tapes.

At a glance...

Completely Automatic	The back up will take care of itself letting you know if any problems arise. Simply set and forget.
On-site and off-site data store	Three tiered backup solution for secure fail-over with a local copy for quick restore.
Secure data encryption	Safe data storage with 1024-bit (military standard) encryption stored at secure data centre.
Unlimited back up generations	Restore from any previous backup with unlimited generations and confidence of data integrity.
No more tapes	Reliable backup with success confirmation without the risk of fragile, lost or corrupt tapes or drives failing.

Secure and automatic backup of your critical data without fuss:

Accounts and customer contact database

Specific files or programmes

Your entire server & mail boxes

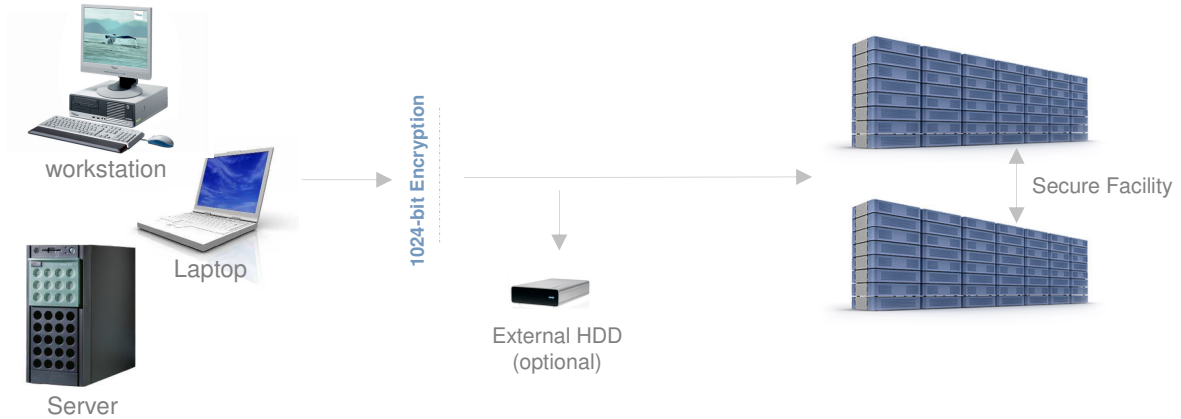

Why Online backup?

- 99% of businesses do not run a proper daily backup routine.
- 80% of businesses carrying out backups still use tape media.
- Only 25% of tapes are stored off-site.
- 60% of backups are incomplete.
- 50% of data restores fail.
- 51% of SMBs that experience data loss will fail within 2 years.

How does it work?

Selected files are automatically compressed, encrypted and then transferred from your server / computer / laptop via the Internet to our secure data centre.

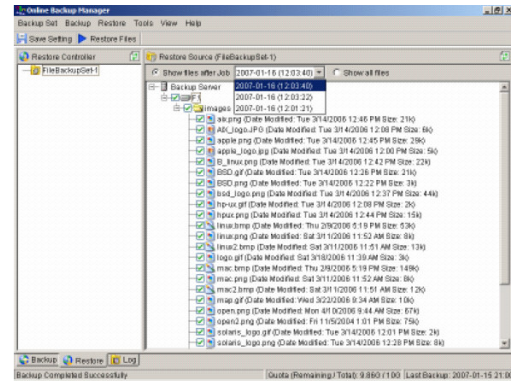

An additional secure backup is also made to an onsite hard drive for quick local restore.

Restoring and managing files is simply a case of point and click using a secure online portal.

Installation and support is given directly by Ashgoal for the full duration of the subscription.

Status reports will be sent to notify you of backup success or failure. These will also be monitored by Ashgoal and appropriate action taken where required.
